

SYSTEMS AND METHODS FOR PROVIDING IMAGE DATA ENCAPSULATED IN A PAGE DESCRIPTION LANGUAGE

ABSTRACT OF THE DISCLOSURE

A multi-function peripheral imaging device for providing page description language (“PDL”) encapsulated image data is disclosed. The imaging device includes a processor for control of the imaging device and memory in electronic communication with the processor. The imaging device also includes a scanner in electronic communication with the processor and a printer in electronic communication with the processor. The multi-function peripheral imaging device includes a control panel for operation of the imaging device by a user. The control panel is in electronic communication with the processor for receiving user inputs. Executable instructions are included that are configured to implement a method for providing PDL encapsulated image data. An image is scanned using the scanner to produce image data. Document and page formatting inputs are obtained from the control panel. The image data is encapsulated in a page description language at the imaging device using the document and page formatting inputs for document formatting.
